

Get to know your Azure Portal <https://portal.azure.com>

Use the “Burger” menu to choose open / closed panel

Use the “New” item to quickly create a new resource

Use drag & drop to order your panel items

Use the “Browse” button to find resource types.

Add / Remove items from your sidebar using the star icon

Use the Search bar to quickly find your resources & the marketplace

Use the Notification button to get updates on your pending operations

Use the Edit button to customise your dashboard

Use the settings button to change the themes and behaviour of the portal

Click “...” to alter the pin

Use the Account Menu to manage your account and switch between available directories

Use the feedback button to tell us what you think!

Use the help button to Manage your support requests

Want the information shown in a “Blade” on your dashboard? Use the “Pin” icon

Manage your dashboards using the dashboard control menu.

Create multiple dashboards to represent your differing operational views and easily switch between them

On the “Settings” blade of a resource click “Export Template” to generate the ARM template!

You can also...

Use the Account management portal to manage your subscription name and billing settings

<https://account.windowsazure.com>

Use the ASM portal to manage items that have not yet migrated to the new Portal

<https://manage.windowsazure.com>

Use the EA portal to manage your Enterprise Agreement subscriptions and billing. Set EA wide controls here such as Work only accounts and marketplace access

<https://ea.azure.com>

Use cross platform CLI tools to manage your resources

Use PowerShell for managing your resources and advanced configurations

Deploy your resources via ARM templates

Explore your ARM resources at <https://resources.azure.com>

Find Quickstart templates at: <https://github.com/Azure/azure-quickstart-templates>

Visualise your templates at: <https://armviz.io>
